

Problemsheet

Git 3

Solve all exercises in <https://gitexercises.fracz.com/>

Preliminary steps:

Configure your local repository (linux/mac/docker – all these platforms should be fine)

For this, run following commands in terminal (**pay attention to name and email format**):

```
git clone https://gitexercises.fracz.com/git/exercises.git
cd exercises
# add local id info
git config --local user.name "Ivan Ivanov" # specify your name from course table
git config --local user.email "Ivan.Ivanov" # specify your Login ID from course table, not email
./configure.sh
```

now you can start solving

```
git start
```

Homework:

Solve all 23 tasks

How to submit:

1. **We will search result** on site by your **Login ID** (you will specify it in user.email setting)
Be sure you can find your results with **Login ID** here: <https://gitexercises.fracz.com/>
2. **Send to lms** screenshot of your page at <https://gitexercises.fracz.com/>
3. **Send to lms** screenshot of your local repo copy structure. For this, run following in "exercise" directory:

```
git log --oneline --decorate --all --graph
```

be sure all commits on top of following commit are shown (if need several screenshots, it's ok):

e457994 (origin/master, origin/HEAD) Fix detecting if any progress was made in the exercise
