Git Lab 3 – Updated Instructions

Preliminary Steps:
1. Configure your local repository (Linux, macOS, or Docker – all platforms are fine).
Run the following commands in your terminal, carefully setting your name and email:

git clone https://gitexercises.fracz.com/git/exercises.git
cd exercises
Add your personal information
git config --local user.name "Your Name"
git config --local user.email "your_email@example.com"
./configure.sh

2. Once configured, start solving exercises:
git start

Homework:
Solve all 23 tasks available at https://gitexercises.fracz.com/

Submission Instructions:
To receive credit for this lab, submit your email address (the one you configured with git config --local user.email)
in the **Canvas Assignment section** for this lab.

Important:
- Any valid email is acceptable (personal or university).
- Make sure the email you submit matches the one you configured locally.
- No screenshots are required.
